

EVOLANCE INSTITUTE OF IT

IT Program

A complete skills breakdown for parents

60+ Skills

practical & job-ready

11 Modules

structured progression

Real Tools

used in actual workplaces

What will my child actually learn?

Computer & OS skills

Work on any computer with confidence — hardware, software, and operating systems.

Workplace readiness

MS Office, Google Workspace, email — skills every employer expects on day one.

Cybersecurity & safety

Protect devices and data — antivirus, OTPs, strong passwords, and threat awareness.

AI & modern tools

Use AI tools and prompts responsibly for school, work, and content creation.

Programming & web dev

HTML, Python, Scratch, C++ and building real websites with WordPress and Webflow.

Design & freelancing

Create graphics with Canva and learn how to earn online with real freelancing skills.

Modules 1 & 2 — Computer foundations & OS

Module 1

Computer fundamentals

- Identify hardware parts & their roles
- Understand input & output devices
- Know processor, RAM & storage
- Read & compare device specs
- Types of computing explained
- Turn on/off & use a computer correctly

Understands how any computer works — inside and out.

Module 2

Operating systems

- What an OS is and why it matters
- Windows navigation & settings
- File management: create, save, rename
- Zip, extract & manage file types
- Screenshots, shortcuts & productivity
- Installing & removing software safely

Navigates any operating system independently.

Modules 3 & 4 — Office tools & Google Workspace

Module 3

MS Office suite

- Format professional documents in Word
- Build & analyse spreadsheets in Excel
- Create presentations in PowerPoint
- Use templates, styles & formatting
- Print, share & export documents
- Email configuration & management

Produces polished documents ready for work or study.

Module 4

Google Workspace

- Set up & manage a Gmail account
- Use Google Docs, Sheets & Slides
- Collaborate in real-time on documents
- Google Drive: organise & share files
- Browser extensions & productivity
- Office communication rules & protocols

Collaborates professionally using Google's tools.

Modules 5 & 6 — Internet, networks & cybersecurity

Module 5

Internet & networks

- What the internet is & how it works
- Types of networks (LAN, WAN, WiFi)
- Safe & effective browser use
- Understanding IP addresses & DNS
- WhatsApp & social media basics
- Remote computing concepts

Uses the internet safely and understands how it works.

Module 6

Cybersecurity & safety

- Identify viruses, malware & threats
- Install & manage antivirus software
- OTPs, two-factor authentication
- Hacker tactics & how to stay safe
- Strong passwords & data protection
- Virus protection & precautions

Protects devices & personal data — a critical life skill.

Modules 7 & 8 — Databases & AI tools

Module 7

Databases

- What a database is & why it matters
- Types of databases (flat, relational)
- Basic data entry & record keeping
- Searching & filtering data
- Introduction to spreadsheet databases
- Real-world database use cases

Understands how data is stored and managed professionally.

Module 8

AI tools for real life

- What AI is & how it works
- Use ChatGPT & Gemini effectively
- Write strong prompts & commands
- AI for homework & content creation
- AI tools for kids & young learners
- Use AI responsibly & safely

Uses AI as a real tool — a genuine career advantage.

Modules 9 & 10 — Programming & web development

Module 9

Programming fundamentals

- Introduction to HTML & web structure
- Scratch: visual programming for beginners
- Python basics: variables, loops, logic
- C & C++ fundamentals
- Problem solving through code
- Build simple programs & projects

Writes real code — from beginner Scratch to Python & C++.

Module 10

Web development

- Build websites with WordPress
- No-code web design with Webflow
- Start a blog & manage content
- Domain, hosting & going live
- Basic SEO & site optimisation
- Portfolio & personal website setup

Builds real websites — ready for freelancing or a career.

Module 11 — Creative design & freelancing basics

Module 11A

Creative design with Canva

- Design posters, cards & social graphics
- Use layouts, fonts & colour theory
- Edit & place images professionally
- Export designs for print & digital
- Create visual content for social media
- Build a basic design portfolio

Creates professional-grade visuals using Canva.

Module 11B

Freelancing basics

- What freelancing is & how to start
- Setting up a profile on Fiverr/Upwork
- Pricing, proposals & client communication
- Delivering work & getting reviews
- Managing time & multiple projects
- Turning IT skills into real income

Knows how to earn money using their new IT skills.

Bonus — IT for kids (junior course outline)

Kids A

Computer basics for kids

- Computer hardware — what's inside?
- Computer software & apps
- How a computer works
- Understanding icons & the desktop
- Apps: what they are & how to use them
- Viruses & staying safe online

Young learners understand computers from the ground up.

Kids B

Digital skills & safety for kids

- Cybersecurity basics for young learners
- Coding introduction (Scratch)
- Operating systems — Windows basics
- AI & what it means for kids
- AI for content creation
- Internet, networking & two-factor auth

Safe, confident, and digitally aware from a young age.

Your child leaves with

60+ real, usable skills.

Computer & OS confidence

Job-ready office & communication skills

Cybersecurity & online protection

Real programming skills (Python, HTML, C++)

Creative design & freelancing ability

Practical AI skills for school and work
